

Precision Safeguarding

Risk-based Treatment

Robert Griffin, Coordinator
Agriculture Quarantine Inspection
USDA, APHIS, PPQ

Two types of treatments

1. Emergency treatments

- Unanticipated pests; unknown infestation level
- No PRA; assumes worst case; usually high efficacy
- Strength of measures based on uncertainty
- Precision linked to action policies

2. Authorized treatments

- Anticipated pests; linked to PRA
- Considers supply chain mitigations
- Precision linked to risk
